

Make it difficult for burglars.

We assist in providing you with high-quality security solutions.

What you really should know:

► **While an alarm system detects the break-in, it does not actually prevent it.** By the time the security service or the police arrive, the burglars will usually already be miles away. Alarm systems are, however, the ideal supplement to mechanical safeguards.

Thus, the basic rules are as follows: **first protect your home mechanically, then acoustically.**

► If there is enough resistance, burglars give up after approx. 3 – 5 minutes. Good mechanical safeguards, when fitted correctly, **provide this high level of resistance.**

► Climbing aids such as ladders, tables, chairs and dustbins **should not be freely accessible**. Otherwise, it is possible for burglars to easily get onto the first floor as well through windows and balconies.

► **Approx. 80%** of conventional windows, patio and balcony doors do not provide sufficient protection against being pried open with a screwdriver or a crowbar.

► Due to a high risk of injury and increase in noise level, burglars avoid **breaking windows**. This kind of break-in is not very common. You can, however, protect your glass windows further using special security films.

► **Always lock your door** because an unlocked door can easily be opened.

EVVA provides you with optimum security and ease of use.

One for all:

If required, you can open or lock all doors e.g. entrance, patio, garage, cellar or summerhouse doors with just one 3KS key.

The comprehensive range of EVVA products provides optimum protection of all your home's weak points. We will be happy to give you further advice.

3KS

The reversible key with 3 curves

COMFORT | ORGANISATION | SECURITY

▶▶▶ Locking system | 3KS

3KS | 3-curve system

Key copying protection

The 3KS system is patented. Key copies are only made upon presentation of the letter of authority.

3KS benefits for you:

Unique

- ▶ With its curve technology, 3KS offers a previously unattained high number of variation options - 30 billion different keys. Every 3KS key is unique.
- ▶ **Easy to use reversible key**
- ▶ However the key is inserted - it always fits.
- ▶ **"BSZ" option (external key override)**
- ▶ Important with e.g. shut doors: Even if a key is inserted on one side of the door, it can be opened from the other side using any authorised key (e.g. that of a family member).

Even more security for your doors:

Security classification

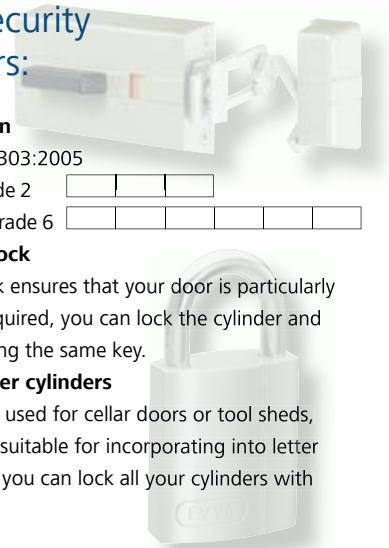

CEN classification EN1303:2005

- attack resistance grade 2

- key related security grade 6

Additional security lock

- ▶ The additional lock ensures that your door is particularly well secured. If required, you can lock the cylinder and additional lock using the same key.
 - ▶ **Padlocks and lever cylinders**
- Padlocks are often used for cellar doors or tool sheds, lever cylinders are suitable for incorporating into letter boxes. If required, you can lock all your cylinders with the same key.

The enemy of thieves and burglars: 3KS

The desire for security is a basic human need. The 3KS security cylinder gives you this piece of mind because it provides you with the **highest grade of break-in resistance, thus giving you optimum protection against break-ins**. The 3KS is, of course, ÖNORM and DIN tested.

Unauthorised opening of the cylinder is practically impossible.

- ▶ **Bump resistant**
- ▶ **Drilling protection** (using hard metal elements)
- ▶ **Scanning protection** (against unauthorised opening using unlocking tools)
- ▶ **Even more wear resistance** (thanks to a special coating)
- ▶ **Less liable to become dirty and smooth insertion of the key** (thanks to the springless function principle)
