The security expert for your hotel

EVVA has been providing security systems for hotels and catering companies worldwide for decades. We are your reliable partner for all security questions, no matter how large your company is.

Security

EVVA is familiar with your requirements as a hotel operator, owner or planner. Your security system needs to transmit a reassuring sense

of security to guests while also taking into account guests' needs regarding convenience and hoteliers' requirements regarding organisation.

Organisation

The EVVA security system manages all access authorisations for your hotel - for all door types and all user groups. If required, the system can include energy usage management, lift controls, parking facility management and billing for additional payable services.

Convenience

Electronic identification media may be used not only as a room key, but also for cashless payment transactions for facilities such as the restaurant, sauna and ski lifts as well as for services such as massage. Such additional services are charged automatically - very convenient for both guests and staff. Identification media are available in different practical formats, such as a wristband, card, key tag or Combi key.

Make yourself at home with us.

Individual solutions

Cost-effectiveness and future-proof investment are a priority when choosing a security system. Whether you have a guest house, city hotel, congress hotel, luxury lodge, spa centre or gourmet restaurant, an EVVA system will match your individual requirements and design concepts precisely.

EVVA's time-tested mechanical and electronic security systems are synonymous with long service life and optimum future-proof investment. Combined locking systems offer a whole range of benefits and are now used in hotels throughout the world. EVVA's Combi key can operate both mechanical and electronic systems.

Your users

Deciding on the right locking system also depends on the type of users in your hotel. Guests, staff and external suppliers have different requirements regarding access situations. User groups differ in terms of their behaviour, trustworthiness, room usage and length of stay on the premises.

Your building

Your needs will be analysed and your security objectives defined according to your building structure. This process identifies your specific requirements with regard to security, convenience and organisation. As a general rule, guest areas (such as rooms, safe and spa centres) staff and restricted areas (reception,

back office, equipment rooms, storerooms, wine cellars), public areas (such as main entrance and parking facilities) and outside areas can be kept separate.

Particularly important for hotels: EVVA's security concept also takes into account all doors along emergency escape routes. Certified products ensure that everyone can leave the building quickly in the event of an emergency such as a fire.

At reception

A single solution for all administration tasks

We will help you to satisfy your guests' requests quickly and without much effort. This includes instant issuing and returning of keys or electronic identification media and immediate additional charge transactions. Services guests use, such as the spa centre, are charged using the software. Your guests conveniently pay at the end of their stay.

All access events can be saved and are thus always traceable for you. Issuing of access authorisations to guests, staff and suppliers according to requirements simplifies your hotel management processes considerably.

One-time access authorisations can also be issued - for instance, when a guest wishes to use the spa again after checking out or if a guest wishes to see their room before checking in.

First impressions count

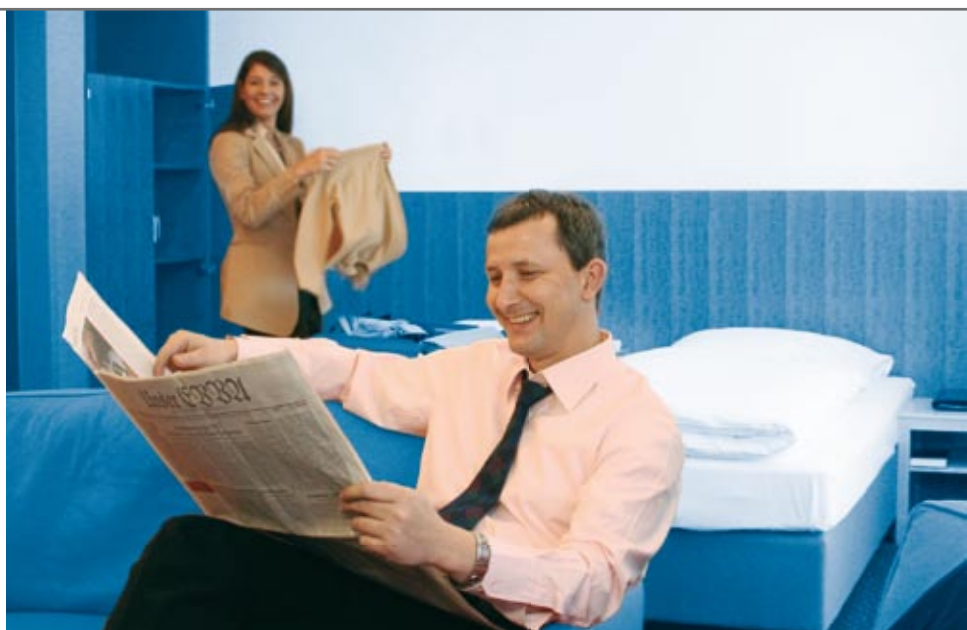

That's why quick, efficient procedures are key at the reception desk as this is where guests begin their vacations. Far away from everyday routine, they wish for comfort, convenience and courteous service. As a hotel reception is the main point of contact, all procedures need to be carried out quickly. Our user-friendly security solutions ensure processes are quickly completed and simplify check-in and check-out procedures for your staff.

In the hotel room

Convenience for your guests

EVVA escutcheons and keys impress due to their ergonomic design and are uncomplicated to use. The electronic escutcheon on room doors features an intuitive design, which is also easy to use for older guests. Your guests' individual requirements can be met - for instance, doors leading to suites can be secured separately. Escutcheons can be equipped with a 'do not disturb' mode to ensure guests' privacy. In the event of an emergency, staff can operate cylinders mechanically from the outside at all times.

EVVA offers a check-in terminal for budget hotels without a reception. Guests can book and pay for their rooms using the terminal twenty-four hours a day.

Safes

Your guests will want to store away valuables safely. Guest identification media also open room safes.

Cylinder & electronic door escutcheons

Our security technology will match your hotel's ambience - Different design variations and surface materials, such as brass and stainless steel, are available.

Energy-saving switch

Make savings on energy. Equipment such as lighting, televisions and air conditioners are only enabled when someone is present in the room. Employees at reception can also check whether guests are in their rooms or not to see if rooms are free for cleaning.

Spa centres and other additional services

Payable services

All amenities, such as the restaurant, solarium, spa entrance, vending machines, laundry and parking facility entrance, can be equipped with reader units which enable guests to use additional services at any time. Service charges are transacted using the guest's identification medium and they are charged at a later stage. This saves guests from carrying around cash or payment cards and reduces administrative work for your staff. There is no longer a need to provide change, sell tokens or keep an authorised user list.

Access

If you require, an escutcheon solution or turnstile can ensure that only authorised users have access to different areas using their room key or identification medium.

Locker solutions

Guests and employees can securely store valuables in a mechanical locker or in the electronic i-Locker - in cloakrooms, changing rooms or ski storerooms, for instance.

Just relax and enjoy ...

Your guests need to be able to relax as much as possible without having to worry about leaving valuables in the changing room. Nobody wants to carry several keys around, particularly when in the spa centre. Guests can comfortably and securely wear their identification medium around their wrist and thus freely move around all areas in the hotel authorised for their use.

Public and restricted areas

Usable anywhere at all times

There are often problems with management and security regarding the use of areas such as the main entrance, lifts, seminar rooms, parking facilities, ski storerooms and other storage areas. Just let your locking system do the work for you. Our solution gives you an overview of your facilities and integrates everything into a single system - even in hotels with many different, sometimes difficult-to-manage areas. Your guests are given a single identification medium for all access areas. This also ensures they are not left standing outside locked doors late at night.

Limited access

Parking spaces are generally scarce and are often used by unauthorised drivers. You can restrict vehicle access to employees and paying guests. They will appreciate the system you have installed as the barrier is very easy to open using their key or identification medium.

Electronic identification media determine whether a lift can be used and which floors

can be accessed. This system ensures the lift is less of a safety hazard for children and helps to reduce energy costs. Noise nuisance is also reduced. Employees can easily switch to preferential mode when using the lift for room service, so that food doesn't get cold, for instance.

Guest identification media store information about which areas a guest may access, such as their room, the spa centre, the restaurant, a parking space or a locker in the ski room. They are specifically excluded from all other areas, such as equipment rooms, the back office, supply storerooms and the wine cellar. Access authorisations for guests and staff can be deleted or re-issued using the software at any time, ideal when staff change or guests leave and new ones arrive.

 *EVVA locking systems provide invaluable assistance for your organisation*
