ICS

The clever system for optimum security

ICS key | innovative technology in timeless design

The unique ICS technology is ideal for professional use. The elegant look of the reversible key is particularly popular among design-orientated customers. Thanks to innovative EVVA technology, keys also feature copying protection against cutting-edge 3D printing methods.

**Added bonus: You can lock all doors with just one ICS key.
Whether it's the entrance, cellar, garage or annex.**

EVVA | unique security

EVVA is constantly investing in research and is always working to develop new key technologies. This means that EVVA consistently meets the increasing requirements for security and organisation.

Additional security with the EVVA security card and technology

The genuine ICS key is produced exclusively by EVVA. Copy keys, additional cylinders and lock charts are only available at an authorised EVVA partner and only with the EVVA security card. EVVA rules out illegal key copies produced by 3D printing methods thanks to the variable depth cuts on the bottom of the keys.

More protection | in any situation

The innovative technology of the ICS cylinder offers long lasting protection against illegal opening methods. The chrome-vanadium elements offer protection against illegal opening methods. Additional security elements guarantee a high resistance to attack, as well as high standards-compliant plug pulling protection as standard. The protection against picking means that the ICS cylinder is practically impossible to open with locksmiths tools.

Choose ergonomic design keys

ICS keys are optionally available with the new, ergonomic high-quality design key bow. The attractive design is available in many different colours.

Benefits

- › Easier to distinguish the keys
- › Simple management of master key systems thanks to colour allocation
- › High quality for improved haptics
